

GEOG 1700

Map Interpretation and Analysis

The first class in the geographic information track, GEOG 1700 introduces students to the study of Geographic Information System technology (GIS) and map/GIS fundamentals, such as coordinate systems, projections and basic ArcGIS 10 functions.

GIS mapping provides the valuable data about people and places that is used today in making key business, scientific, environmental, marketing, urban planning, and governmental decisions. GIS is a top ten fastest growing career field according to the U.S. Department of Labor.
